Selection and bundling

A. Randomly selected packages

(n packages)

B. Bundle and source maps

Download, pseudo-bundle, extract

1. **Download list of patch-level dependencies of 40 packages**

▼

2. **Download each package alone, without its dependencies (loop over 40)**

▼

3. **Pseudo-bundle**

▼

4. **Extract functions**

Problem

- Code is functional but convoluted and disorganized
- Reason: AI incremental fixes and new features

Cross-cutting requirement

- Code understandable
- Output of each step stored
- Automate the pipeline with Bash
